ENGINEERING CHANGE NOTE (ECN)

PROJECT: Project Asynch
ORIGINATION: Professor Kid Kidd
PURPOSE OF CHANGE: Improving Reliability
DOCUMENT NUMBER: ECN 2.0
DATE OF PUBLICATION: October 15, 2026

LEAD ENGINEER: Kid Kidd, UMBC
TEAM LEAD: Niccolo James Lee Capones

EXECUTIVE SUMMARY: The system now includes a custom function to count elapsed time of a program in milliseconds in the program. It replaced `millis()` which is an aspect of the native arduino library.

HIGH-LEVEL DESCRIPTION: The system incorporates a custom function `myMillis()` to count the elapsed time since running a program in milliseconds.

REASON FOR CHANGE: Having a custom function reduces the likelihood of copyright and patent infringement. It also allows us to have further customizations for timing in the system.

Changed Documents:

- **N/A**

Added Documents:

- ECN 2.0 has been attached
- proj3.INO has been attached
- Included Design 3.0 and Design 4.0 [D3.0, D4.0]
- Included Design 1.13 [D1.13]
- Updated testing video
- Code Explanation Video

Removed Documents:

- asynchProj2.INO has been removed

Replaced Documents:

- Project 2: Cyclical System has been replaced with Project 3: myMillis

Any Additional Design Considerations: N/A
